

## \*\*\*IMPORTANT INFORMATION\*\*\*

Thank you for purchasing a KP SS Idler! This Idler pulley is made for ocean riding, racing and salt water. It is designed to be lightweight, corrosion resistant, and hard for long belt life and pulley life. Unlike aluminum idler pulleys, this idler will not pit or distort. KP offers a limited lifetime warranty.

The KP limited lifetime warranty covers any manufacturing defects or failures associated to a defect. Not regularly replacing the bearing, neglect or not maintaining the pulley, is not covered under the warranty. Installing a steel bearing will ruin the press fit and idler pulley as the bearing rusts. This will void the warranty. You must replace the bearing with a KP SS bearing or equivalent. KP recommends bearing inspection/replacement on a monthly basis during riding season. KP recommends removing the pulley over the winter to prevent corrosion of the idler bearing.

Sincerely,  
The KP Team
